

MagniLink Visus

MagniLink Visus

MagniLink Visus is a smart electronic magnifying glass – you control all the functions with one hand. The monitor and the high resolution camera are of the best quality, which makes it easy to use MagniLink Visus to read price labels in shops, text on medicine bottles or menus in restaurants. With the built-in support leg, you can also read slightly larger sections of text.

Exceptional picture quality

Magnilink Visus is supplied with a newly developed screen 3.4" (AMOLED) or 4.3" (TFT). The 3 megapixel camera holds its contrast and sharpness regardless of magnification.

One-handed grip

The MagniLink Visus' innovative design combines ergonomics and user-friendliness – all of the buttons are operated with the thumb, on a One-handed grip. In this way you will not need to hold the product with two hands when you want to change function. The handle is coated with rubber so that it sits comfortable in your hand.

Comfortable reading

The folding support leg ensures that the image does not shake whilst you are reading, making it simple to get through the text. This also means you can use MagniLink Visus to read larger sections of text.

MagniLink Visus uses "liquid lens technology" which instantly changes the sharpness of the picture when adjusting its distance from the text. You have up to 14 times magnification, a choice of artificial colours and two levels of contrast. Both mains and USB chargers are included.

Features and advantages

- The highest quality picture thanks to a newly developed screen and a 3 megapixel camera
- Choose between two different screen sizes – 3.4" or 4.3"
- Up to 14x magnification (5.5x for Visus 3.4) in three stages
- User-friendly and ergonomic design
- Foldable support leg which makes it simple to read larger sections of text
- Unique review mode for finding what you are looking for
- Picture freeze function – for taking pictures of text which are difficult to get to, and to view them later
- Save and transfer pictures
- Quick-start mode – start reading immediately
- Batteries can be charged via USB or electrical mains
- Light can be switched off, e.g., to read the screen of a mobile phone

All functions are accessed from a one-handed grip

Great picture quality

Choose between several levels of contrast

Rubber-coated handle for the best grip
